Fri May 10, 2019, **3 miles**

I was going to run 5 miles on a treadmill but had to stop after 3 miles because my left calf cramped again as it did last week and this left my leg really sore. After an hour or so I could not stand on my toes because it made my calf hurt so much. We went to see Dr Dan Young a chiropractor in Erie. He has helped us with similar situations in the past. He massaged my calf and IT band for about 15 minutes. During this treatment I had a great deal of discomfort but I knew it would help a lot. And it did. Right after the treatment I had no problem standing on my toes. Dr Young showed Mary Jane how to massage my leg.

In the past week: 26.5 miles

Sat May 11, 2019 **5 miles**

Before running Mary Jane massaged my sore calf and again I had a great deal of discomfort. Because of this I did not think I would be able to run much at all. When I went out the door to run I was thinking I would run slowly in the beginning and then walk and run a couple of miles after that. After a slow mile mainly uphill I had no problem running, picked up the pace and ran a total of 5 miles averaging 10:40/mile on hilly roads. It was an enjoyable run with no problems. I think if Mary Jane continues to massage my leg everyday before I run, I should recover quickly.

I did okay at the Erie Endurance Run on Saturday. During the twelve hour period between 6:30AM and 6:30PM runners could start at any time they wanted and run as many 1.05 mile loops around a park as they wanted. Because it was cold at 6:30AM, I started running at 9:00AM when the sun was out and it was a little warmer. The course is relatively easy compared to other ultra marathon courses with two slight up hills. One is about 400m long and the other about 300meters long. There is one slight downhill that is about 500m long. I ran an even

pace with very short walks to drink out of a bottle of Gatorade or defizzed Coke that I carried. Mary Jane gave me a full bottle every 5 loops or so. I ran 22 loops in 4:23:56 and covered 23.1 miles. At the 22 loop point I felt myself getting tired even though I was still running the same pace. I was happy with my run and didn't feel like walking and running which I think I could have. Many runners ran and walked for eleven or twelve hours with one of them covering 55.7 miles. I had the 16th longest distance out of 40 participants. My average pace was 11:26/mile which was 4th fastest out of 40. Maybe next time I will try walking more in this event and lasting longer.

9:34 (133 bpm), 9:03 (142), 9:08 (142), 9:27 (142), 9:37 (142)

I have done similar tests for years. The following are the rules I will be using for a while for the test.

1. For the first mile start running at about 9:50/mile pace and increase the speed during the mile so that at the end of the mile the average pace is about 9:30/mile. At the end of the mile start the wrist stop watch. Remember the time for the mile as read from the treadmill display and heart rate (HR) as read from HR monitor on GPS. The HR will be less than 142 bpm.
2. Continue to increase speed during the second mile and then adjust the speed up or down near the end of the second mile so the HR is 142 +/- 1 bpm at the end of the second mile. At the end of the second mile record the split on the stop watch and remember the HR which should be close to 142 bpm.
3. Continue adjusting the speed so HR stays near 142. Also continue taking splits for each mile and remembering HR at the end of each mile. Stop running after a mile split goes above 9:30.
4. After doing this test maybe once or twice a week for a while, you will be able to run more and more miles during the test. It will be necessary then to lower the upper limit on the last mile split from 9:30 to maybe 9:20 or lower.

Sat Aug 1, 2020 **6.4 miles**

I organized and ran in a 5.4 mile handicapped run for 6 runners. The course is 3 x 1.8 miles on a 1.8 mile road loop. It has a very short hill in the beginning of the loop. The Saturday before the run each runner ran 3 loops with a 5 minute rest between the loops. I used their times to handicap today's run. The discussion I emailed to the group before today's run is below. It explains the handicapping and discusses the care we took for protection against Covid 19.

My Run; After warming up with a mile at various paces I ran the 5.42 miles in 47:16 or 8:43/mile.

Mile Splits: 8:48, 8:48, 8:44, 8:55, 8:26, and the last 0.42 miles at 8:37/mile

Email to runners: Handicapping 5.4 mile run August 1, 2020

That was an enjoyable workout on Saturday. And I was happy that we followed safe procedures. I hope we can all take part in the 5.4 mile handicapped run on Saturday at 7:00 AM at the same place. Please don't let your guard down. Continue to wear masks when appropriate and to follow social distancing. I have heard TV reports that the recent increase in the virus's spread has been in part due to people interacting with their friends while not expecting to spread the disease or to be infected.

Below I explain the way I did the handicapping for the run and explaining how each of us will start at a different time so that we will all finish roughly at the same time. At the end of the run please do not run within 15 feet of another runner without your mask on.

I have added the three times that each runner had on Saturday July 25, and used these sums to calculate the starting times for runners on coming Saturday August 1. I ran the same 3 x 1.8 mile workout on a different day. So I will be running on Saturday too. The sum of the three times for me was 46:52. But I think I probably would have run about 10 seconds per mile faster if I had not been running alone. So I am using 46:00 for me. Even with this adjustment I have the slowest time so I will be starting first.

Times and totals		Start Times	Result for 5.4 miles August 1, 2020
Jim	16:01, 15:44, 15:07 Total = 46:52 -> 46:00	0	47:16
Bill	15:12, 15:11, 15:17 Total = 45:40	0:20	46:08
Brian	15:01, 15:23, 14:30 Total = 44:54	1:06	
David	15:02, 15:06, 13:21 Total = 43:29	2:31	43:38
Tim	14:52, 13:56, 12:51 Total = 41:39	4:21	
Colton	13:56, 13:03, 12:16 Total = 39:15	6:45	

I took the difference between my total time and the total time for each of the other runners to determine how much time after I start should each of you start. These differences are what is listed above under "Start Time". So when I start each of you should start your watches at the same time. When your watch gets to the time listed for you that is when you start. If you want to know the time that you run the 5.4 miles (three loops without stopping) you just subtract your Start Time from the total time your watch records.

We probably won't run the 5.4 miles at the same pace as we ran each of the 1.8 miles last Saturday because we took two 5 minute rests when we ran the 3 x 1.8 miles. But I am thinking the differences given in the last column will still have all of us finishing at about the same time. It will be a good experiment.

From my last 3 workouts I found when I am running on a relatively small loop, like the 0.317 mile cemetery loop, my Garmin Forerunner 35 is more accurate when worn on my right wrist. I have measured the loop with a wheel at a distance of about 1 foot away from the inside edge. Today when I ran 10 loops, I ran 5 loops in one direction and 5 loops in the other direction, and the distance came out to be 3.16 miles.

Our summer running group ran a 10K on Tamarack Drive.

warm up: 0.75 miles at various paces and some drills. I think I should have warmed up more because it took a couple of miles during the 10K to feel I was running more efficiently.

Run: I ran 10k out and back along Tamarack Dr. The course was more up hill going out and more down hill coming back. Time for 1st 5K: 28:04. Time for 2nd 5K: 26:17

Run: 4 miles on the Allegheny track in 39:19, splits: 9:58, 10:02, 10:00, 9:20, the last $\frac{1}{4}$ mile in 2:07

Warm down: 0.25 mile jog

Thur Sept 24, 2020 **2 miles**

Run: 2 miles on hilly roads averaging 10:46/mile.

Fri Sept 25, 2020 **5.1 miles**

warm up: $\frac{1}{8}$ mile of dynamic drills

I ran on the Allegheny track, running wide on the curves so each lap was $\frac{1}{4}$ mile.

Run: 3 x 1 mile with $\frac{3}{4}$ mile jogs between the runs,

Mile times: 9:14, 8:56, 8:24 $\frac{3}{4}$ mile jog times: about 8:28 (11:17/mile)

The last $\frac{1}{4}$ mile 7:36/mile pace

Warm down: $\frac{1}{2}$ mile

In the last week: 23.9 miles

Sat Sept 26, 2020 **6.6 miles**

Run: 6.6 miles on hilly roads averaging 11:30/mile

Sun Sept 27, 2020 **6.2 miles**

Run: 6.2 miles on slightly hilly roads averaging 11:27/mile

Mon Sept 28, 2020 **6.6 miles**

Run: 6.6 miles on hilly roads averaging 11:55/mile

The following graphs are for the run I had on Mon Sept 28. The most interesting things I see in them are two sudden transition where my pulse at one point lowered very quickly and in the other it raised quickly but it lowered again because I started running slower. I wonder if I had maintained the same pace if my pulse would have remained higher.

Wed Sept 30, 2020 **5.1 miles**

I ran and walked 5.1 miles on very hilly roads and averaged about 12:00/mile

When running uphill I kept my pulse between 110 and 120 bpm by running and walking.

Fri Oct 2, 2020 **2.6 miles** of walking on hilly roads averaging 15:27/mile

In the last week: 24.5 miles of running

Sat Oct 3, 2020 **5 miles** of walking on very hilly roads averaging 15:40/mile

Sun Oct 4, 2020 **No running or walking**

Mon Oct 5, 2020* **2.1 miles** of walking on very hilly roads in the cemetery

warm up: 0.25 mile walk to the cemetery

Walk, starting to collect data for a heartbeats/Mile investigation:

0.8 mile downhill walk, Ave Pace: 15:16/mile, Ave HR: 76,->1160 heartbeats/Mile, 267 ft/mile el. gain

Warm down: 0.25 mile walk home

Tues Oct 6, 2020* **3.7 miles** of walking on very hilly roads

I did the same workout as yesterday except I walked 2 times down and up the hill.

0.8 mile downhill walk, Ave Pace: 14:10/mile, Ave HR: 77,->1091 heartbeats/Mile, 267 ft/mile el. gain

0.8 mile uphill walk, Ave Pace: 14:34/mile, AveHR:110,->1602 heartbeats/Mile, 267 ft/mile el. loss

0.8 mile uphill walk, Ave Pace: 15:54/mile, AveHR:105,->1670 heartbeats/Mile, 267 ft/mile el. loss

Wed Oct 7, 2020* **3.7 miles** of walking on very hilly roads

I did the same workout as yesterday except today the first down and up was faster than the second. Yesterday it was the other way around.

0.8 mile downhill walk, Ave **Pace:** 15:16/mile, Ave HR: 76,->1160 heartbeats/Mile, 267 ft/mile el. gain

0.8 mile uphill walk, Ave Pace: 15:50/mile, Ave HR: 93,->1472 heartbeats/Mile, 267 ft/mile el. loss

0.8 mile downhill walk, Ave Pace: 14:04/mile, Ave HR: 86,->1210 heartbeats/Mile, 267 ft/mile el. gain

0.8 mile uphill walk, Ave Pace: 14:26/mile, AveHR:116,->1674 heartbeats/Mile, 267 ft/mile el. loss

Thur Oct 8, 2020 **4.3 miles running 1 mile walking**

warm up: 0.25 to cemetery

Run and walk: 3 x down and up the 0.8 mile cemetery hill, 4.8 miles

I ran down, and I walked and ran up the hill. When going up I ran until my pulse rose above 120 beats/min and then walked until my pulse went below 110 beatsmin.

Time for 4.8 miles: 59: 55, Ave Pace: 12:29/mile, Ave HR:112,->1398 heartbeats/Mile

Warm down: 0.25 mile jog home

Fri Oct 9, 2020 **4.3 miles running 1 mile walking Compare to yesterday's workout.**

warm up: 0.25 to cemetery

Run and walk: 3 x down and up the 0.8 mile cemetery hill, 4.8 miles

I ran down, and I walked and ran up the hill. When going up I ran until my pulse rose above 130 beats/min and then walked until my pulse went below 120 beatsmin.

Time for 4.8 miles: 56: 32, Ave Pace: 11:51/mile, Ave HR:118,->1399 heartbeats/Mile

Warm down: 0.25 mile jog home

I had more beats per minute today than yesterday. Next time I should keep my pulse between 115 and 105 bpm when going up hill.

In the last week: 8.6 miles of running, 16.5 miles walking

Sat Oct 10, 2020 **7 miles**

Our summer running group ran a 10K on Tamarack Drive.

warm up: 0.5 mile jog

Run: I ran 10k out and back along Tamarack Dr. The course was more up hill going out and more down hill coming back. I ran with Jim Fitch and we averaged 9:39/mile. My average heart rate for this run was 161 bpm as read on my GPS. I think my GPS wasn't reading correctly because 161 bpm would be near my maximum.

Sun Oct 11, 2020 **no running**

Mon Oct 12, 2020 **1 mile jog**

Tues Oct 13, 2020 **4.3 miles running and 1 mile walking**

warm up: 0.25 mile jog

Run and walk: 3 x down and up the 0.8 mile Greendale Cemetery hill.

The 3 down hill runs: Ave Heart Rate: 108, Ave pace: 10:03

The 3 up hill run/walks: Ave Heart Rate: 109, Ave pace: 14:46

Today Oct 13:

Time for 4.8 miles: 59: 34, Ave Pace: 12:24.5/mile, Ave HR:108.5,->1345 heartbeats/Mile

On Thur Oct 8, 2020:

Time for 4.8 miles: 59: 55, Ave Pace: 12:29/mile, Ave HR:112,->1398 heartbeats/Mile

On Oct 8 when going up hill, I ran until my HR was up to 120 bpm and then walked until my HR was 110 bpm and then repeated.

On Oct 13 when going up hill, I ran until my HR was up to 115 bpm and then walked until my HR was 105 bpm and then repeated.

On Oct 13 my average rate was faster and heartbeats/mile was lower.

Therefore this scheme is better. I should repeat these two workouts and also try the following:

When going up hill, run until my HR is up to 110 bpm and then walk until my HR is 100 bpm and repeat.

Fri Oct 16, 2020 **2.1 miles walking**

I walked 2.1 miles including down and up the hill from the top of Greendale Cemetery to Jefferson St. The elevation change on the 0.8 mile hill is 276 ft.

For the uphill walk:

Time: 12:00, *Ave pace: 14:57/mile, Ave heart rate 110 bpm, 1644 heartbeats/Mile*

On Oct 13, I ran and walked up the same hill with the following result:

Ave pace: 14:46/mile, Ave heart rate 109 bpm, 1610 heartbeats/Mile

It appears that running and walking is only slightly better than just walking for the same average Heart Rate. Actually there may be an insignificant difference.

In the last week: **12.3 miles running**

Sat Oct 17, 2020 **3.7 miles walking**

I walked 3.7 miles including 2 x down and up the hill from the top of Greendale Cemetery to Jefferson St. The elevation change on the 0.8 mile hill is 276 ft.

For today's 1st downhill walk:

Time: 10:49, *Ave pace: 13:32/mile, Ave heart rate: 83 bpm, 1124 heartbeats/Mile*

For today's 2nd downhill walk:

Time: 11:29, *Ave pace: 14:23/mile, Ave heart rate: 71 bpm, 1021 heartbeats/Mile*

The slower downhill walk had fewer heartbeats/mile. I should do a walk that is even slower. When I do the even slower walk I should repeat the other two downhill walks so all three are done on the same day.

For today's 1st uphill walk:

Time: 11:22, *Ave pace: 14:14/mile, Ave heart rate: 95 bpm, 1352 heartbeats/Mile*

For yesterday's uphill walk:

Time: 12:00, *Ave pace: 14:57/mile, Ave heart rate: 110 bpm, 1644 heartbeats/Mile*

For today's 2nd uphill walk:

Time: 12:16, *Ave pace: 15:19/mile, Ave heart rate: 76 bpm, 1164 heartbeats/Mile*

I have to repeat these three walks and do them on the same day. The results here appear to be inconsistent.

Sun Oct 18, 2020 **5.3 miles walking**

I walked 5.3 miles including 3 x down and up the hill from the top of Greendale Cemetery to Jefferson St. The elevation change on the 0.8 mile hill is 276 ft.

For today's 1st downhill walk:

Time: 11:16, *Ave pace: 14:08/mile, Ave heart rate: 105 bpm, 1484 heartbeats/Mile*

For today's 2nd downhill walk:

Time: 11:49, *Ave pace: 14:47/mile, Ave heart rate: 84 bpm, 1242 heartbeats/Mile*

For today's 3rd downhill walk:

Time: 12:16, *Ave pace: 15:19/mile, Ave heart rate: 91 bpm, 1394 heartbeats/Mile*

Inconsistent results

For today's 1st uphill walk:

Time: 11:21, *Ave pace: 14:08/mile, Ave heart rate: 120 bpm, 1696 heartbeats/Mile*

For today's 2nd uphill walk:

Time: 12:04, *Ave pace: 15:04/mile, Ave heart rate: 110 bpm, 1657 heartbeats/Mile*

For today's 3rd uphill walk:

Time: 12:55, *Ave pace: 16:05/mile, Ave heart rate: 94 bpm, 1512 Heart Beats/Mile*

Sometime I should do 3 uphill runs with average paces of about 15,16,17 min/mile. As the pace gets slower there should be a pace where the beats per mile goes up.

Mon Oct 19, 2020 **no running or walking**

Tues Oct 20, 2020 **3.7 miles walking**

I walked 3.7 miles including 2 x down and up the hill from the top of Greendale Cemetery to Jefferson St. The elevation change on the 0.8 mile hill is 276 ft.

For today's 1st downhill walk:

Ave pace: 13:10/mile, Ave heart rate: 120 bpm, 1580 heartbeats/Mile (Too Fast)

For today's 2nd downhill walk:

Ave pace: 14:03/mile, Ave heart rate: 113 bpm, 1588 heartbeats/Mile

These downhill walks had high heart rates compared to Oct 17.

I think the first downhill walk was so fast it was over some kind of limit above which a faster heartbeat was triggered.

For today's 1st uphill walk:

Ave pace: 14:20/mile, Ave heart rate: 130 bpm, 1863 heartbeats/Mile (Too Fast)

For today's 2nd uphill walk:

Ave pace: 15:44/mile, Ave heart rate: 113 bpm, 1778 heartbeats/Mile

From these results I think I walked the first downhill and uphill too fast because my high heart rate carried over into the second down and up.

A heart rate of 105 bpm max is maybe about best for downhill. Check this.

A heart rate of 115 bpm max is maybe about best for uphill. Check this.

Wed Oct 21, 2020 **No running or walking**

Thur Oct 22, 2020 **5.3 miles** of walking

I think I am tired.

Sun Oct 25, 2020 **4.4 miles** of walking

Walk: 4.4 miles including 12 loops on the Greendale 0.317 mile loop.

Total ascent on the 12 loops: 264 ft

I tried to keep my heart rate under 120 bpm while walking up hill.

On the loop: Distance: 5.07 miles, Ave Pace: 14:13, Ave Heart Rate: 105,

1493 heartbeats/Mile

5 days ago I did the same distance with the following result:

On the loop: Distance: 5.07 miles, Ave Pace: 13:53, Ave Heart Rate: 101,

1402 heartbeats/Mile

When going faster my heart rate was lower on average. ?

Thur Oct 29, 2020 **4.27 miles** walking

I walked down Limber and Jefferson, and into the Cemetery up to the loop.

After walking 5 loops I walked back home.

The sum of the ascents on the course is about 500 ft.

Distance: 4.27 miles, Ave Pace: 14:19, Ave Heart Rate: 111, 1589 heartbeats/Mile

The large value of beats/mile maybe because of the large value of sum of ascents as compared to what I have been walking recently.

Fri Oct 30, 2020 **4.7 miles** walking

warm up: 0.4 mile walk

Walk: I walked 4 miles: 3 x 1.25 miles down and up on the Greendale Cemetery hill plus 0.25 miles on the loop.

The sum of the ascents on the course is about 515 ft.

Distance: 4 miles, Ave Pace: 14:08, Ave Heart Rate: 105, 1484 heartbeats/Mile

heartbeats/mile is less than yesterday's.?

In the last week: no miles of running

Sat Oct 31, 2020 **5.2 miles** of walking

warm up: 0.4 mile walk to the cemetery

Walk: 4.8 miles, I walked down and up the cemetery hill 3 times. Sum of ascents: 650 ft
Ave pace: 15:12, Ave heart rate: 105 Heart Beats/mile:1596

My heart rate went up a lot near the end of the walk.

Mon Nov 2, 2020 **no running and walking**

Tues Nov 3, 2020 **4.9 miles** of walking

Thurs Nov 5, 2020 **4 miles** of running

I ran and walked 4.5 miles including 12 x cemetery loop or 3.8 miles **12:37/mile**

I walked 1:05 on each loop while going uphill. **Average heart rate: 118 bpm**

1489 heartbeats/mile. This is comparable to values I have been getting while only walking. **I tried to keep my heart rate under 125 bpm.**

Fri Nov 6, 2020 **4.5 miles of running**

I ran 4.5 miles including 12 x cemetery loops or 3.8 miles averaging **12:34/mile**

No walking, **Average heart rate: 123 bpm**

1546 heartbeats/mile. I tried to keep heart rate under 130 bpm.

Comparing this to yesterday, I think walking and running may be more efficient.

In the last week: 8.5 miles of running

Sat Nov 7, 2020 **4 miles of running**

I ran and walked 4 miles including 9 x cemetery loop or 2.85 miles averaging **12:40/mile** I walked about 40 seconds up hill during each loop.

No walking, **Average heart rate: 121 bpm**

1532 heartbeats/mile, a little less than yesterday. I tried to keep heart rate under 125 bpm.

I am starting to think my average heart rate for a 50 mile run should be under about 122 bpm. This rate should be for running or walking up hills.

Sun Nov 8, 2020 **3.75 miles of running**

I ran on Tamarack Drive while watching runners in our running group run 8 miles.

warm up: 0.25 mile jog

Run: 2 miles averaging 11:28/mile, Ave Heart Rate: 119

Run/Walk: 2 miles averaging 12:31/mile, Ave Heart Rate: 117/mile

These results seem to show it is more efficient to only run on relatively level ground.

Mon Nov 9, 2020 **no running**

Tues Nov 10, 2020 **no running**

Wed Nov 11, 2020, **4.9 miles running**

Warm down: 0.5 miles

In the last week: 22.6 miles running

Sat Nov 14, 2020 **no running**

Sun Nov 15, 2020 **no running**

Mon Nov 16, 2020 **4 miles running 0.6 miles walking**

warm up: 0.25 jog to Greendale cemetery

Run/walk: 4 miles on the long steep hill and cemetery loop. I walked and ran and kept my pulse under 125 bpm and averaged 13:20/mile. The last mile time was 12:25 because after 3 miles I was running and walking at a faster pace and had a lower pulse. This was very interesting.

Tues Nov 17, 2020 **no running**

I used our elliptical for 25 minutes. My average pulse was 103 bpm. At the end I went faster and my pulse went up to about 140 bpm.

Wed Nov 18, 2020 **no running**

I used our elliptical for 24 minutes. My average pulse was 119 bpm. I did 2 x 6 minutes at a fast pace. Each fast part was followed by 6 minutes at a slow pace. The average heart rate during the fast parts was about 140 bpm and during the slow parts about 100 bpm.

Thurs Nov 19, 2020 **no running**

On October 1, 2020 I had cataract/glaucoma surgery on my right I. Today I had the same surgery on my left eye and will continue to do lighter training for about 4 more weeks.

I kept heart rate under 125 bpm

Fri Nov 27, 2020 **3.7 miles of walking** mostly on hilly roads.
This included 2 of the fastest miles I have walked.
Walk: 6+ times around the cemetery, Distance: 2 miles, Pace: 12:51/mile, HR:130,

873 heartbeats/1000 steps

Fri Dec 4, 2020 **3 miles of running** and 1.5 miles of walking
Run/walk: I ran and walked 4 miles on the cemetery hill.
Distance 4 miles, Time: 52:36, HR: 117, Ave Pace: 13:09/mile, 1539 heartbeats/mile
I ran all down hills and ran uphill until my heart rate reached 125 bpm. Then I walked
until it went down to 115 bpm.
I am thinking that walking and running is more efficient than running at 13:00/mile
average.

In the past week: **3 miles running**

Sat Dec 5, 2020 **2 miles** of running on hilly roads in the cemetery.

Sun Dec 6, 2020

Tues Jan 26, 2021 on elliptical

40 minutes on the elliptical. Most of my workouts on the elliptical have included intervals of short fast runs of about 1 or 2 minutes in duration separated by slow intervals. In those workouts my heart rate responded quickly to pace. Today Then I decreased my “speed” from 22 to 15.5 over the next 16 minutes. As expected my heart rate increased as I was increasing my “speed” during the first 24 minutes. But what was interesting and not totally expected was what happened as I decreased the “speed”. In the past when doing interval training is when I quickly dropped my “speed” my heart rate dropped too. Today when I slowly lowered my “speed” my heart rate stayed up near the peak value for almost the rest of the workout. I should repeat this workout but when I get to the peak “speed” after 24 minutes, I should quickly drop my “speed” to 15.5 and find out how long it takes my heart rate to start dropping. It could be when going fast for a long time the heart rate can't respond to the pace as quickly as when doing interval training.

50 minutes on the elliptical. I slowly increased my rate from a “speed” of about 15.5 to a “speed” of about 23 over a 24 minute time period. Then in contrast to what I did in my last workout I quickly reduced my “speed” to 15.5. My heart rate quickly started to go down and reached a baseline of about 110 in about 2:30. After a few minutes I did 3 x 1:00 at a speed of about 21.5 and 1 x 1:30 at a “speed” of about 24. The intervals were separated by slow 2:00 “jogs”. My pulse reached 160 during the last fast interval.
