

Dear Dr Wiseman,

Oct 11, 2016

Thank you for seeing me on October 4 and prescribing a 30 day heart monitor. I am looking forward to seeing you again on Nov. 17.

I want to give you an update. Generally I am feeling better. But on the evening of October 4 I had my head bent back for about 15 minutes while looking at stars with students. I got dizzy and slightly nauseous for about 30 minutes. Thinking there may possibly be something wrong in the back of my neck, I saw my internist Dr Oyler today. He arranged an MRI at Meadville Medical Center on Tues Oct 18. He also wants me to see a neurologist. I will soon call to make an appointment with Dr. Simona Velicu whom I saw in January 2015 at your hospital.

Symptoms during the last few months (some more often than others and some simultaneously):

- x back of neck discomfort
 - x constant ringing in my ears
 - x noticable short periods of increase in skipping heart beats
 - x dizziness
 - slight nausea
 - vertigo
 - slight headache
 - jerkiness in my field of view on one occasion when I didn't feel well
 - numbness and something I describe as puffy feeling in my face
 - lightheadedness
 - imbalance a few times
 - slow heart rate until I started taking CoQ10
 - numbness in left hand many years ago lasting for many months after injury to neck
- x indicates a symptom I had today
